

METHOD FOR READING SENSOR

ABSTRACT OF THE INVENTION

5 A method for reading sensor that stores data in numerous
separate memory cells, such as 1-D linear sensor or 2-D sensor
composed of some 1-D linear sensor. To read the sensor, initially
receiving a parameter which is a positive integer N , then skipping some
former memory cells, finally starting to read following memory cells
10 behind the $(N - 1)$ th memory cell.
